# VIRTUAL STEM WORKSHOPS

Kindergarten to Cycle 1 Secondary | Québec

After 32 years, **Scientists in School** is branching out. We are now delivering our engaging **hands-on STEM workshops virtually**. All of the highly investigative activities you expect, **delivered safely and seamlessly** to your classroom.

**Cost: \$240**

Class size: 27 Students Maximum

Duration: 1 hour

**Click here to book!**

## Age Groups

Click on the grade below to access descriptions of the virtual workshops available for your students:

Kindergarten

Cycle 1

Cycle 2

Cycle 3

Cycle 1 Secondary

We understand how important virtual security and privacy are to you. We ensure our seamless workshop delivery through Microsoft Teams is secure and private.

## Value Proposition

Your inquisitive students, under the guidance of experts, will become scientists, engineers and environmental stewards while developing the global competency skills they need to become tomorrow's STEM workforce.

## Our virtual classroom workshops bring:

- + Individually packaged investigative materials provided in advance.
- + Fun and relevant investigations that build critical thinking, creativity, and problem-solving skills.
- + The opportunity to highlight STEM careers and professional opportunities for students.
- + Dynamic presenters, who are scientists, engineers, and technologists.

## How it works:

Browse through this catalogue and select a workshop.

Book a workshop by visiting the booking portal [here](#).

Receive mini science bags and distribute to students.

Join the Microsoft Teams meeting.

Presenters lead the workshop remotely.

## On the Move!

Kindergarten

Explore how things move! Discover the science behind a magic trick, defy gravity by creating a balancing bird, engineer a car and race it to the finish line. We'll be on the move!

## Sense of Wonder

Kindergarten

The world around us is a feast for our senses! Investigate sound and design your own shakers. Explore how our sense of taste and smell are connected. Trick your eyes with 3D glasses you make and keep.

## Sticky Science

Kindergarten

Get sticky with it! Discover the science of sticky. Make your own glue from food products and test them to see how they hold. Create your own sticky art. And of course, there will be silly putty!

Our Kindergarten friends were SO engaged during our virtual workshop. They had a blast being little scientists and experimenting with different materials to learn about physics. I'm looking forward to continuing our exploration and extending the learning after our workshop!

Kindergarten Teacher

Participants  
receive their own  
MINI SCIENCE BAG  
and get to keep  
all of the  
materials!

# Cycle 1, Elementary

Virtual STEM workshops delivered across Canada | [www.scientistsinschool.ca](http://www.scientistsinschool.ca)

**Cost: \$240**

Class size: 27 Students Maximum

Duration: 1 hour

**Book here!**

## Intriguing Invertebrates

Who has thousands of teeth? Who can float on water? Are you intrigued? Students will learn about the invertebrates in their own backyards by creating models of these creatures. Physical characteristics, habitats they live in, the way they move and eat will be investigated with hands-on and engaging activities.

## Properties Really Matter

Liquids and solids are everywhere! Explore household solids and liquids and how they interact. Investigate the properties of solubility, absorption and buoyancy. Then engineer the solution to a common problem. Create an unusual concoction from an everyday solid and watch it dance!

## Structures, Materials and More

Follow an engineer's journey from materials to structure. Explore a variety of materials to understand their qualities. Then, through trial and observation, test for structural effectiveness. Learn about attaching items with a fun fastener challenge. Finally, build with materials to understand the purpose of structures.

Scientists in School provided an engaging, real life learning opportunity for my students. I love that each student has their own Mini Science Bag to allow students to further the concepts that we experienced as a class.

Cycle 1 Teacher

**Participants receive their own MINI SCIENCE BAG and get to keep all of the materials!**

# Cycle 2, Elementary

Virtual STEM workshops delivered across Canada | [www.scientistsinschool.ca](http://www.scientistsinschool.ca)

Cost: \$240

Class size: 27 Students Maximum

Duration: 1 hour

**Book here!**

## Hoo's in the Owl Pellet?

Experience being a real-life biologist! Use an integrated STEM approach to investigate the diet of an owl and estimate the prey number and type. Dissect an owl pellet, sort and identify bones. Opportunities pre- and post-workshop to enhance your student's literacy, numeracy and visual arts activities by integrating owl pellet dissection and analysis into your program.

## Strong Structures

Build your knowledge of structural strength as a junior engineer. Discover how to design a structure to withstand both tension and compression. Test different materials for strength, and investigate how the strength of a material can be altered by manipulating its shape!

Participants receive their own MINI SCIENCE BAG and get to keep all of the materials!

I'm using this workshop as a model for ways to improve my teaching and science program. I love the ongoing questions and surplus of materials that students keep to continue their exploration and discovery. Fantastic!

Cycle 2 Teacher

# Cycle 3, Elementary

Virtual STEM workshops delivered across Canada | [www.scientistsinschool.ca](http://www.scientistsinschool.ca)

**Cost: \$240**

Class size: 27 Students Maximum

Duration: 1 hour

**Book here!**

## As a Matter of Fact...

Discover why chemistry matters! Explore solubility, crystallization and a change in state while writing your initials. Create a situation where nothing remains the same and observe and identify the indicators of a chemical change. Solve a mystery using the physical and chemical properties of materials found in the cupboard!

## Electricity: Close the Circuit!

Explore the nature of electricity and its use. See how static electricity makes objects move. Design and build circuits to learn how a house is wired. Test conductors, insulators and switches.

## Our Place in Space

Explore Earth's relationships within our solar system. Discover how to tell time using the sun and an instrument you keep in your pocket. Examine the phases of the moon with the help of a special device. Construct and test technology used at the International Space Station. Find out more about our place in space!

## Shine a Light

Join us on this optical adventure and discover how light passes through objects and forms shadows. Bounce and bend light to investigate reflection, refraction, and fibre optics. Demonstrate how light travels with a flashlight that you can keep!

## Up in the Air!

It's all about balance when exploring flight. Coanda effect, the properties of air and Newton's third law are all important when soaring above the clouds. Experiment with a variety of materials to construct the perfect parachute and make a glider that will boggle your mind.

Such a great workshop! The kids had a great time and have been talking about it ever since! We learned so much and it was a great kick-off to our science unit. One girl even said she wanted to be an engineer after the workshop - I was thrilled!

Cycle 3 Teacher

Participants  
receive their own  
MINI SCIENCE BAG  
and get to keep  
all of the  
materials!

# Cycle 1, Secondary

**Cost: \$240**

Class size: 27 Students Maximum

Duration: 1 hour

**Book here!**

## All Systems Go!

Get a grip on systems! Build an assistive hand device like those created by biomedical engineers to aid with fine motor skills. Explore inputs and outputs as you design and analyze linkages, incorporate pneumatics, assess mechanical advantage and consider tradeoffs in force, distance and materials. It's all systems go!

## Engineer It: Up, Out and Across

Your students will use sophisticated building techniques to test the limits of three different structures. Build up to new heights with a tower challenge; build out to explore cantilevers; and build across while learning about the wonders of suspension bridges.

## Finding Solutions!

Be part of our STEM start-up company and design a planet-friendly bath product. Check out the competition and define criteria which will differentiate your creation. Explore the properties of matter and learn about acidity and basicity. Use the particle theory to communicate the results of investigations into concentration and rate of dissolving. Then use your science savvy to plan, design and test your own magic formula.

## Genetic Diversity and You!

Explore the genetic diversity in plants, animals and humans through genetic traits. Find out which traits are common and how they are passed down. Read chromosomes, examine families and calculate the probability of traits passing to the next generation. Enhance your understanding of mutations by making a DNA model of your name.

The Scientists in School workshops are a fun and exciting way to engage students in curriculum-connected STEM learning. I was impressed by the quality of the activities in the workshop, and found the scientist to be knowledgeable and friendly.

Grade 7 Teacher

Participants  
receive their own  
**MINI SCIENCE BAG**  
and get to keep

materials!

# OUR ANNUAL IMPACT

2020-2021:  
Organization-wide

## Our Mission

Our Mission is to ignite scientific curiosity in children so that they question intelligently; learn through discovery; connect scientific knowledge to their world; are excited about science, technology, engineering and math; and have their interest in careers in those fields piqued.

## Our Vision

Our Vision is for all young Canadians to be actively engaged in the seeing, doing and understanding of science.

We are very grateful to have engaged 185,000 children in rich, engaging virtual experiences, during a year of challenging health restrictions. We're looking forward to expanding our reach with both in-person and virtual experiences in the future.

Young scientists inspired by our workshops in Ontario and Alberta since 1989!

# PARTNERS IN STEM

Scientists in School is a leading science education charity that has reached over 10 million young scientists since our founding in 1989. Through our hands-on, inquiry-based STEM classroom and community workshops, we strive to ignite scientific curiosity in children so that they question intelligently; learn through discovery; connect scientific knowledge to their world; get excited about STEM; and have their interest in careers in those fields piqued.

None of this would be possible without the support of our corporate, community, government and individual donors who provide funding that is used to subsidize the cost of all workshops, provide complimentary workshops to schools and organizations in marginalized and under-resourced communities, develop new programs and improve existing programs, and expand to new communities across Canada.
